**IRRITANT AND CORROSIVE EFFECTS:**

Laboratory studies have been conducted on similar polyphenyl ether formulations and these data are considered representative of SANTOVAC® 5 Lubricant.

In a controlled skin contact study, no skin irritation (primary or cumulative) or skin allergy was observed in humans following repeated exposures to a polyphenyl ether formulation similar to SANTOVAC® 5 Lubricant.

Increases in liver weight and liver/body weight ratios with accompanying increase in liver cell size, considered to be related in increased liver metabolic activity and increases in adrenal weight were noted in rats following repeated skin exposure (4-weeks) to a second polyphenyl ether formulation. This same formulation produced no genetic changes in standard tests using animal or bacterial cells.

**SENSITISATION:**

Repeated dose toxicity (sub-acute to chronic)
